Because Proleukin® (aldesleukin) for injection is administered routinely in a limited number of institutions throughout the United States, the treatment centers and physicians appearing on the preceding list have been selected based upon their considerable experience in the administration of Proleukin therapy. This list may not be complete and is provided as a courtesy for those who wish to contact an experienced center to obtain additional information about Proleukin therapy. No fees were paid or other consideration provided for placement on the list, and we have not independently investigated or evaluated these centers or physicians. Names, addresses, and Web links are provided by Prometheus only for reference and solely as a starting point for you to learn where and how to find further information and evaluate different treatment options and providers. Just as the inclusion of a physician or treatment center should not be construed as a referral, endorsement, or recommendation, the absence of any particular physician or center should not be taken as disapproval in any way. We have simply listed resources that have come to our attention and which may help you gather further information. Prometheus is not and shall not be liable to you or anyone else for the accuracy, reliability, timeliness, or efficacy of any information you obtain through the information and listing we provide nor for your reliance on any information you may learn from them and use to make any decisions or take any actions. Patients should always consult their own physician, advisors, and healthcare providers when evaluating information related to any course of treatment.

PROLEUKIN® (aldesleukin) is indicated for the treatment of adults with metastatic renal cell carcinoma and metastatic melanoma.

IMPORTANT SAFETY INFORMATION

Therapy with Proleukin® (aldesleukin) for injection should be restricted to patients with normal cardiac and pulmonary functions as defined by thallium stress testing and formal pulmonary function testing. Extreme caution should be used in patients with a normal thallium stress test and a normal pulmonary function test who have a history of cardiac or pulmonary disease.

Proleukin® should be administered in a hospital setting under the supervision of a qualified physician experienced in the use of anti-cancer agents. An intensive care facility and specialists skilled in cardiopulmonary or intensive care medicine must be available.

Proleukin® administration has been associated with capillary leak syndrome (CLS) which is characterized by a loss of vascular tone and extravasation of plasma proteins and fluid into the extravascular space. CLS results in hypotension and reduced organ perfusion which may be severe and can result in death. CLS may be associated with cardiac arrhythmias (supraventricular and ventricular), angina, myocardial infarction, respiratory insufficiency requiring intubation, gastrointestinal bleeding or infarction, renal insufficiency, edema, and mental status changes.

Proleukin® treatment is associated with impaired neutrophil function (reduced chemotaxis) and with an increased risk of disseminated infection, including sepsis and bacterial endocarditis. Consequently, preexisting bacterial infections should be adequately treated prior to initiation of Proleukin® therapy. Patients with indwelling central lines are particularly at risk for infection with gram positive microorganisms. Antibiotic prophylaxis with oxacillin, nafcillin, ciprofloxacin, or vancomycin has been associated with a reduced incidence of staphylococcal infections.

Proleukin® administration should be withheld in patients developing moderate to severe lethargy or somnolence; continued administration may result in coma.

Because Proleukin® (aldesleukin) for injection is administered routinely in a limited number of institutions throughout the United States, the treatment centers and physicians appearing on the preceding list have been selected based upon their considerable experience in the administration of Proleukin therapy. This list may not be complete and is provided as a courtesy for those who wish to contact an experienced center to obtain additional information about Proleukin therapy. No fees were paid or other consideration provided for placement on the list, and we have not independently investigated or evaluated these centers or physicians. Names, addresses, and Web links are provided by Prometheus only for reference and solely as a starting point for you to learn where and how to find further information and evaluate different treatment options and providers. Just as the inclusion of a physician or treatment center should not be construed as a referral, endorsement, or recommendation, the absence of any particular physician or center should not be taken as disapproval in any way. We have simply listed resources that have come to our attention and which may help you gather further information. Prometheus is not and shall not be liable to you or anyone else for the accuracy, reliability, timeliness, or efficacy of any information you obtain through the information and listing we provide nor for your reliance on any information you may learn from them and use to make any decisions or take any actions. Patients should always consult their own physician, advisors, and healthcare providers when evaluating information related to any course of treatment.
